9 (Mavericks), 10 10 (Yosemite), 10 11 (El Capitan), 10 12 (Sierra) and macOS 10.. 13 (High Sierra), macOS 10 14 OS X can read NTFS formatted drive but not write to them.. that means that you can copy anything you want off this drive but if you want to add or change any data on it you should either reformat the drive mac os extended (if you'll only use it with OS X), FAT (read+write by both os x and windows) or use extra software like macfuse and NTFS-3g which make NTFS drives writable from OS X.
